TECHNOLOGY

## PROFILE

---

True enthusiast with a strong foundation in front-end technologies like HTML, CSS, and JavaScript, paired with extensive experience in backend development using Python. Proficient in working with essential Python libraries like Pandas and Matplotlib for data analysis and visualization. Expertise in both SQL and MongoDB for database management. Capable of quickly understanding complex codebases and highly adaptable in learning new programming languages and frameworks.

## EXPERIENCE

---

Worked on many small projects with teams which deals with front-end, back-end and mobile apps.

- Worked on Data-Visualization.
- Worked on Responsive Websites
- Blogs using HTML, CSS.
- Remote Learning Platform.
- Altered HTML templates.
- Worked with AI Tools for efficiency in work.

## Current Project:

- Currently working on SIH project which deals Human curation and search engine.
- MoodMoji is a simple and engaging web app that lets you check in with your emotions using emojis. It helps you track your mood over days, weeks, or months, giving you a clear picture of how you've been feeling, all securely saved with your own login.
